**Subject**: Re: Permissions for pollinators book

Dave, you're right that if the graphs are simply plotting previously published data points, no permission is needed. We will still need the correct citation.

I think Figures 8-1, 8-2 and 8-3 were prepared by the workgroup that prepared Chapter 8—I don't think they originate from another source. My guess is Cynthia Scott-Dupree may have had a hand in drafting them since some of the data points in the figures are from her previously unpublished work. I'll check with Cynthia to get clarification.

The figures plot data, some of which were previously published, but since we are not actually copying a figure from those publications, do we have to get permission from them to produce our original figures? I'm assuming we don't. Correct? I will seek clarification from Cynthia on the Johansen et al. 1986 citation and determine if it really should be Johansen et al. 1983.

Dave

Subject: Permissions for pollinators book

Dear Tom and Dave,

Forgive me if I was not clear with you about permissions that we need for the pollinators book. I have the ones that Tom sent with regard to the images, but we will also need permission for those figures or tables that have been previously published. Here goes:

Figures 8-1, 8-2, 8-3 are attributed to Johansen et al. 1986...but there is no accompanying reference. So, we'll need the complete reference listing as well as permission to reuse those figures. We may very well be able to obtain the permissions online, but we first need the source.

Figure 11-1 is attributed to Wang M, Grimm V (2007) Home range dynamics and population regulation: an individual-based model of the common shrew. Ecological Modelling 205: 397-409. Permission through RightsLink will cost \$44.85.

Figure 11-2 is attributed to Wang and Grimm 2010 in ET&C, so no problem there. We will give Wiley the permission statement to include.

Figure 11-3 is attributed to Schmolke, A., P. Thorbek, D. L. DeAngelis, and V. Grimm. 2010b. Ecological modelling supporting environmental decision making: a strategy for the future. Trends in Ecology & Evolution 25:479-486. Permission through RightsLink will cost \$44.85.

Figure 11-4 is attributed to Martin, S. J. 2001. The role of Varroa and viral pathogens in the collapse of honeybee colonies: a modelling approach. Journal of Applied Ecology 38:1082-1093. Permission through RightsLink will cost \$276.00. (Jen, this is a Wileypublished journal. Dont' know whether that makes a difference.)

Table 10-4 is attributed to a SETAC book, so not problem there. We will give Wiley the permission statement to include.

If this information is not accurate, please let me know. As well, please confirm that all the other figures and tables are original and not reprinted from a previous publication. Don't worry about the permission grant fees; we will take care of those, but we just needed to confirm that all of the above is accurate before we purchase the rights.

Thanks! Mimi and Jen
